

## **Fenestration Canada: Regional Event 2019**

**Date** | Tuesday, April 9<sup>th</sup> 2019

**Location** | Durabuilt Windows & Doors  
10920 – 178 St. Edmonton, AB

### **Fenestration Performance: Cold Compliance and Alternatives**

**Presented by, Justin Pockar**

This session will cover changes to building and energy codes that Alberta will adopt in 2019. In addition, we will look at the increasing desire for designers and contractors to use more performance based alternatives to prescriptive compliance in these codes. Finally, future code direction and objectives will be covered to solidify the ideas that performance objectives for the fenestration component are long term realities of building codes, and that whole building solutions and component performance dependencies are likely to be the most cost effective solutions in future buildings.

#### **About Justin Pockar**

Prior to joining The City of Calgary, Justin worked as a consultant, completing several projects certified to LEED Gold or better. As Energy and Environment Coordinator for Planning & Development at the City of Calgary, current responsibilities include administration and integration of sustainable design policies and technology into the approvals processes and built environment. He has authored several works, notably playing a role in the development of the National Energy Code of Canada for Buildings (NECB), and contributing volumes for both ASHRAE and BIM Canada publications. In addition, he occupies positions on the Canada Green Building Council Alberta Board of Directors, the Standing Committee for Energy Efficiency at the National Research Council, and SAIT's Green Building Technology Centre Board.
